

# LUMINESS AIR®

## TIPS & TRICKS

### TIP ① SPRAY LIGHTLY

Correct

Incorrect (heavy spray)

For best results, spray lightly by pulling the throttle between mark 1 and 2 on the stylus.

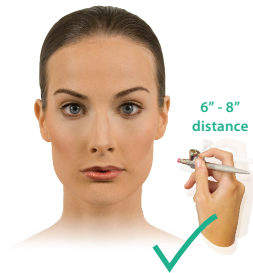

*Only pull back your lever all the way to the 3rd position when cleaning, never when applying makeup.*

### TIP ② KEEP A GOOD DISTANCE

We recommend holding the airbrush approximately 6-8 inches from the face.

*Spraying too close will cause the makeup to look blotchy and caked-on.*

Correct

The 6-8" distance allows the airbrush to diffuse and feather makeup on the face properly.

Incorrect

Try not to hold the airbrush too close to the face. Results will look very blotchy and spotty.

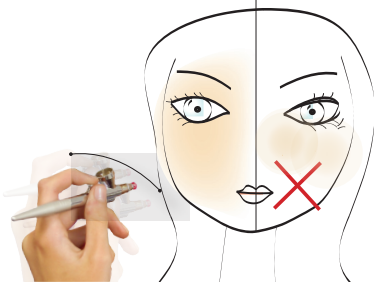

### TIP ③ KEEP YOUR HAND MOVING

Correct

Keep the hand moving and spraying lightly in circular motion.

Incorrect

Spraying in a stop-and-go motion will cause spots and blotchiness.

### TIP ④ APPLY IN LAYERS

Very Sheer Coverage  
Full coverage

#### Light Coverage Layer

Spray one sheer layer for light coverage. Each step is achieved with a delicate hand using a circular motion.

#### Medium Coverage Layer

Allow the first layer to dry approximately 2-5 seconds. Then apply a second layer for more coverage.

#### Full Coverage Layer

Apply a third, fourth or more layers step by step. Each layer should be light and applied when the previous layer is completely dry.

### TIP ⑤ PERFECT APPLICATION

Keep the hand moving and spraying lightly in a circular motion or figure 8 movements. USE THE SAME HAND MOTION AS WITH A REGULAR BRUSH.

**STEP 1:** Start with a clean face.

**STEP 2:** Apply a light first layer of airbrush foundation in a circular motion.

**STEP 3:** Allow the first layer to dry 3-5 seconds, then apply additional layers until the desired coverage is achieved.
